

Silo for Research Analyst Pack

Feature suite to enhance analyst productivity

Silo for Research Analyst Pack is a suite of productivity enhancement features for analysts. It includes the following three add-ons offered on a per-analyst basis:

Schedule and automate repetitive collections

[Collector](#) is an automated collection extension for analysts, providing the following capabilities:

- Collection scheduling, including recurring collection (e.g., hourly, weekly, time of day) via an intuitive UI
- Scheduled collection tradecraft for the surface and dark web, including customized browser fingerprint; mobile device emulation; and in-region internet access and time zone
- Automated out-of-band translation for visual collections from international sites
- Access to an advanced video downloader
- Scheduled content collections downloaded to Silo Drive outside the organization's perimeter

Execute context-aware multi-site search workflows

[Multi-Site Search](#) allows analysts to configure and execute multi-search workflows seamlessly. It offers a set of preconfigured websites and workflows which can be customized and enhanced to fit any type of investigation.

- Easily create and modify workflows for any type of search
- Find the right workflows for any investigation using a context-aware, right-click menu and copy/paste search box
- Import and export workflow configurations and share workflows with others on your team
- Review all searches during an investigation using the built-in audit trail

Build a visual audit trail for analysts

[Case Manager](#) is an extension that allows analysts to maintain a visual audit trail of every website and action taken in an investigation.

- Automatically capture every webpage visited — imaged and MHTML — and view the audit trail in-platform
- Auto-capture page metadata, timestamp and navigation breadcrumbs
- Create a new investigation or continue “recording” on one that already exists
- Capture separate admin file hashes to validate assets haven't been tampered with
