

Silo DVR: Time-stamped screen recordings for audit, compliance, and investigation review.

Logs tell you what happened. Alerts tell you when. Silo DVR shows you exactly how—with encrypted, frame-by-frame video evidence of analyst activity.

Modern digital investigations require stepping beyond the perimeter — engaging directly with threats in real time, interacting with untrusted content, and making judgment calls as situations unfold. For administrators and compliance leaders, however, that same freedom introduces risk. Logs are essential. Alerts are powerful. But they each lack the nuance required to fully understand analyst behavior in high-stakes environments.

Silo DVR fills this gap.

Silo DVR provides time-stamped screen recordings of user activity within the Silo platform, delivering visual evidence of what an analyst was doing at a specific moment in time. Every session is recorded, encrypted, and made available to administrators through the Silo Admin Console, ensuring oversight without disrupting investigative workflows.

Specifications

- **Format:** Standard MP4
- **Encryption:** AES-256 (Authentic8-managed or customer-managed keys)
- **Access:** Silo Admin Console or API download
- **Scope:** Silo Apps (browser recording coming soon)
- **Retention:** Configurable per organization policy
- **Watermark:** User, egress node, timestamp on all recordings
